## App development

### Build and manage apps in your Dev Dashboard

Dev Dashboard is your new app development home, with more capabilities and tools than legacy custom apps offer.

**Build apps in Dev Dashboard** [Learn more](#)

### Legacy custom apps

Create an app

⚠ As of January 1, 2026, merchants can no longer create new legacy custom apps. This won't impact existing apps. Partners can create new custom apps prior to transferring stores to merchants. Once the store is transferred, new custom apps will be disabled.

### Develop apps with caution

All apps are subject to the [Shopify API License and Terms of Use](#). In addition, you should not use apps to customize checkout.

Legacy custom app development allowed on October 07, 2023 by Mindaugas Cerniauskas (mindesc@gmail.com).

### Storefront API

Develop customized shopping experiences. [Learn more](#)

**i** Choose custom distribution for your app before enabling Storefront API. [Select distribution method](#)

Shopify provides a Storefront API that allows you to customize Shopify buying experiences. The Storefront API allows you to access product information, create customer orders, and check out purchases programmatically.

Enable Storefront API

### Protected customer data access

To protect merchants and their customers, apps that are distributed on the App Store and use Admin API, checkout UI extensions, or the Customer Account API, need to request access to customer data, like names, emails, and order history. Learn more about Shopify's [requirements to access protected customer data](#).

Request access

### Request additional scopes and APIs

**i** Additional API access is granted based on your app's [distribution model](#). Choose your distribution model before requesting.

Choose distribution

Public and custom apps can request access to:

- [Read all orders](#), instead of the last 60 days
- [Subscriptions API permissions](#) including the read\_customer\_payment\_methods and write\_own\_subscription\_contracts scopes.
- [Payment mandate scopes](#) like write\_payment\_mandate
- [Post-purchase extensions](#)

Distribution

App history

**Only apps that are distributed on the App Store need to submit their access for review**  
If you're installing on a dev store, select your data use in step 1 to access protected customer data.

**1 Select your data use and reasons**  
You can access your selected data in development without submitting for review.

**Protected customer data**

Close

Includes data about customers or visitors to stores that's available through the Customers, Orders, Online store and other Admin API resources, Customer Account API resources, or checkout UI extensions.

Select your reasons for using protected customer data.

- Customer service  
Example: respond to customer questions on behalf of merchants
- Store management  
Example: print order labels or track inventory
- App functionality  
Example: bill merchants or authenticate users
- Analytics  
Example: measure app performance
- Personalization  
Example: show customers personalized product recommendations
- Marketing or advertising  
Example: send abandoned cart recovery messages
- Other

Describe your reason in detail
